

Residency Program Pass Rates 2006 - 2008

This report contains information about the internal medicine certifying examination performance of programs accredited by the Accreditation Council for Graduate Medical Education (ACGME). For each residency program listed in the following pages, the American Board of Internal Medicine (ABIM) reports the cumulative pass rate for the 2006 to 2008 certifying examinations in internal medicine.

What data are reported?

For each program, this report lists the number of candidates that took the examination, the number who passed, the percent that passed, and the 95% confidence interval. The confidence interval identifies the range within which the program pass rate would fall 95 out of 100 times if we repeatedly tested its residents. For example, a program with a 75% pass rate and a confidence interval of $\pm 15\%$ has very high (95%) assurance that its "true" pass rates are neither lower than 60% nor higher than 90%. The confidence intervals must be taken into account in interpreting these data. In making comparisons between individual programs, the range of pass rates defined by the confidence intervals should be compared rather than the specific percent passing in each program. For your information, the distribution of program pass rates is included at the end of the pass rate listing.

Which residents are included in the calculation of a program's pass rate?

Candidates are included in the computation of a program pass rate if they meet four conditions.

1. They are first takers of the 2006, 2007, or 2008 certifying examinations in internal medicine (repeat takers are excluded).
2. They completed training in the year of or the year before the first attempt (i.e., a candidate who took the 2008 certifying examination for the first time must have completed training in 2007 or 2008).
3. The final year of training is in internal medicine or a combined training program such as pediatrics and medicine.
4. Candidates must have received their satisfactory final evaluation of clinical competence from the training program.

Which programs are included in this report?

Programs are included in this report only if they are currently accredited by the ACGME; however, pass rates are reported only if a program has at least ten (10) residents who meet the above criteria. Programs with fewer than ten residents meeting these criteria are included if they were accredited from July 1, 2003 through June 30, 2008 (i.e., long enough to produce residents who met the training requirements for the 2006, 2007, and 2008 examinations). For these programs only the number of examinees is reported.

What are the limitations of the data?

Many factors influence a program's pass rate. Some are directly attributable to the program such as curriculum, faculty, and resident selection criteria. Others relate to examinees and/or the examination and are beyond the control of the program. Examinee factors include work habits during training and preparation for the examination, while examination factors include the specific content sampled in any year's test.

Other limitations may also affect the precision of these data. First, the sizes of the confidence intervals vary with the number of trainees so caution should be exercised in interpreting the pass rates, especially for programs with fewer than 25 examinees. Second, if significant changes in the program have occurred within the three-year period, pass rates may not fully reflect these changes. Third, data are presented at the title program level as listed in the ACGME *Graduate Medical Education Directory* and therefore may include residents trained in affiliated hospitals/institutions.

These data can only be properly understood in the context of statistical explanations provided above.

**ACGME Accredited Programs with at Least Ten First-Time Takers
Over the Three-Year Period**

Number of Programs = 388
Mean = 92%
Standard Deviation (SD) = 6%

Mean + 1 SD = 98%
Mean - 1 SD = 86%
Mean - 2 SDs = 80%
Mean - 3 SDs = 74%
