

Residency Program Pass Rates 2014 - 2016

This report contains information about the internal medicine certifying examination performance of programs accredited by the Accreditation Council for Graduate Medical Education (ACGME). For each residency program listed in the following pages, the American Board of Internal Medicine (ABIM) reports the cumulative pass rate for the 2014 to 2016 certifying examinations in internal medicine.

What data are reported?

For each program, this report lists the number of candidates that took the examination and the percent that passed.

Which residents are included in the calculation of a program's pass rate?

Candidates are included in the computation of a program pass rate if they meet four conditions.

1. They are first takers of the 2014, 2015, or 2016 certifying examinations in internal medicine (repeat takers are excluded).
2. They completed training in the year of or the year before the first attempt (i.e., a candidate who took the 2016 certifying examination for the first time must have completed training in 2015 or 2016).
3. The final year of training is in internal medicine or a combined training program such as pediatrics and medicine.
4. Candidates must have received their satisfactory final evaluation of clinical competence from the training program.

Which programs are included in this report?

Programs are included in this report only if they are currently accredited by the ACGME; however, pass rates are reported only if a program has at least ten (10) residents who meet the above criteria.

What are the limitations of the data?

Many factors influence a program's pass rate. Some are directly attributable to the program such as curriculum, faculty, and resident selection criteria. Others relate to examinees and/or the examination and are beyond the control of the program. Examinee factors include work habits during training and preparation for the examination, while examination factors include the specific content sampled in any year's test.

Other limitations may also affect the precision of these data. First, programs with smaller numbers of examinees will have less stable results so caution should be exercised in interpreting the pass rates, especially for programs with fewer than 25 examinees. Second, if significant changes in the program have occurred within the three-year period, pass rates may not fully reflect these changes. Third, data are presented at the title program level as listed in the ACGME *Graduate Medical Education Directory* and therefore may include residents trained in affiliated hospitals/institutions.

These data can only be properly understood in the context of statistical explanations provided above.

Alabama

Program Name City and State	Number of Examinees	Percent Passing
Brookwood Baptist Health Program Birmingham, AL	23	83%
