

# ADVANCED HEART FAILURE AND TRANSPLANT CARDIOLOGY Blueprint

## *Maintenance of Certification (MOC)*

### Purpose of the exam

The exam is designed to evaluate the knowledge, diagnostic reasoning, and clinical judgment skills expected of the certified advanced heart failure and transplant cardiology specialist in the broad domain of the discipline. The ability to make appropriate diagnostic and management decisions that have important consequences for patients will be assessed. The exam may require recognition of common as well as rare clinical problems for which patients may consult a certified specialist in advanced heart failure and transplant cardiology.

### Exam content

Exam content is determined by a pre-established blueprint, or table of specifications. The blueprint is developed by ABIM and is reviewed annually and updated as needed for currency. Trainees, training program directors, and certified practitioners in the discipline are surveyed periodically to provide feedback and inform the blueprinting process.

The primary medical content categories of the blueprint are shown below, with the percentage assigned to each for a typical exam:

Medical Content Category	% of Exam
Heart Failure	50%
Mechanical Circulatory Support	22.5%
Heart Transplantation	22.5%
Pulmonary Hypertension	5%
	<b>100%</b>

Exam questions in the content areas above may also address clinical topics in general internal medicine that are relevant to the practice of advanced heart failure and transplant cardiology.

*ABIM is committed to working toward health equity and believes that board-certified physicians should have an understanding of health care disparities. Therefore, health equity content that is clinically important to each discipline will be included in assessments, and the use of gender, race, and ethnicity identifiers will be re-evaluated.*

### **Exam format**

The exam is composed of up to 235 single-best-answer multiple-choice questions, of which approximately 30 are new questions that do not count in the examinee's score. Most questions describe patient scenarios and ask about the work done (that is, tasks performed) by physicians in the course of practice:

- Making a diagnosis
- Ordering and interpreting results of tests
- Recommending treatment or other patient care
- Assessing risk, determining prognosis, and applying principles from epidemiologic studies
- Understanding the underlying pathophysiology of disease and basic science knowledge applicable to patient care

Some questions require interpretation of pictorial material, such as coronary angiograms, ultrasound images, computed tomograms, magnetic resonance images, electrocardiograms, and echocardiograms. More information on how exams are developed can be found at:

<https://www.abim.org/about/exam-information/exam-development.aspx>.

Examinees will have access to an external resource (e.g., UpToDate®) for the exam. A tutorial including examples of ABIM exam question format can be found at

<http://www.abim.org/maintenance-of-certification/assessment-information/advanced-heart-failure-transplant-cardiology/exam-tutorial.aspx>.

The blueprint can be expanded for additional detail as shown below. Each of the medical content categories is listed there, and below each major category are the content subsections and specific topics that *may* appear in the exam. Please note: actual exam content may vary.

**Heart Failure****50%** of Exam

<b>Acute</b>	10%
New-onset	
Hemodynamics	
Decompensated	
Shock	
<b>Heart failure with reduced ejection fraction (HFrEF)</b>	15%
Stage B	
Stage C	
Stage D	
Comorbidities	
Palliative and transitional care	
<b>Heart failure with preserved ejection fraction (HFpEF)</b>	7.5%
Stage B	
Stage C	
Stage D	
Comorbidities	
Palliative and transitional care	
<b>Specific etiologies of heart failure</b>	17.5%
Adult congenital heart disease	
Arrhythmia-related	
Inherited cardiomyopathy	
Hypertension	
Hypertrophic cardiomyopathy	
Infiltrative cardiomyopathy	
Inflammation and infection	
Coronary artery disease and acute myocardial infarction	
Non-ischemic cardiomyopathy	
Pericardial disease	
Peripartum cardiomyopathy	
Toxic cardiomyopathy including chemotherapy	
Valvular heart disease	

**Mechanical Circulatory Support****22.5%** of Exam

<b>Patient selection</b>	6.5%
Timing of referral	
Comorbidities	

Psychosocial circumstances	
Hemodynamics	
<b>Temporary circulatory assist devices</b>	5%
Percutaneous	
Surgical	
Extracorporeal membrane oxygenation	
Palliative and transitional care	
<b>Durable left ventricular assist devices</b>	10%
Abbott HeartMate 3™	
Complications	
Medtronic HVAD®	
Complications	
Palliative and Transitional care	
<b>Total artificial heart</b>	<2%

## Heart Transplantation

22.5% of Exam

<b>Patient selection</b>	3%
Timing of referral	
Consent process	
Comorbidities	
Psychosocial circumstances	
Hemodynamics	
Combined organ transplantation	
<b>Listing criteria</b>	<2%
<b>UNOS algorithms</b>	<2%
