Critical Care Medicine
Certification Examination Blueprint

Purpose of the exam

The exam is designed to evaluate the knowledge, diagnostic reasoning, and clinical judgment skills expected of the certified critical care medicine specialist in the broad domain of the discipline. The ability to make appropriate diagnostic and management decisions that have important consequences for patients will be assessed. The exam may require recognition of common as well as rare clinical problems for which patients may consult a certified critical care medicine specialist.

Exam content

Exam content is determined by a pre-established blueprint, or table of specifications. The blueprint is developed by the ABIM and is reviewed annually and updated as needed for currency. Trainees, training program directors, and certified practitioners in the discipline are surveyed periodically to provide feedback and inform the blueprinting process.

The primary medical content categories of the blueprint are shown below, with the percentage assigned to each for a typical exam:

<table>
<thead>
<tr>
<th>Medical Content Category</th>
<th>% of Exam</th>
</tr>
</thead>
<tbody>
<tr>
<td>Renal, Endocrine, and Metabolic Disorders</td>
<td>15.0%</td>
</tr>
<tr>
<td>Cardiovascular Disorders</td>
<td>17.5%</td>
</tr>
<tr>
<td>Pulmonary Disease</td>
<td>20.0%</td>
</tr>
<tr>
<td>Infectious Disease</td>
<td>12.0%</td>
</tr>
<tr>
<td>Gastrointestinal Disorders</td>
<td>5.0%</td>
</tr>
<tr>
<td>Neurologic Disorders</td>
<td>9.5%</td>
</tr>
<tr>
<td>Hematologic and Oncologic Disorders</td>
<td>5.5%</td>
</tr>
<tr>
<td>Surgery, Trauma, and Transplantation, and Transplantation</td>
<td>7.0%</td>
</tr>
<tr>
<td>Pharmacology and Toxicology</td>
<td>4.5%</td>
</tr>
<tr>
<td>Research, Administration, and Ethics</td>
<td>2.0%</td>
</tr>
<tr>
<td>Critical Care Ultrasound Scanning</td>
<td>2.0%</td>
</tr>
<tr>
<td></td>
<td>100%</td>
</tr>
</tbody>
</table>
Exam questions in the content areas above may also address clinical topics in general internal medicine that are relevant to the practice of critical care medicine (including some general pediatrics with an emphasis on adolescent medicine).

**Exam format**

The exam is composed of multiple-choice questions with a single best answer, predominantly describing patient scenarios. Questions ask about the work done (that is, tasks performed) by physicians in the course of practice:

- Making a diagnosis
- Ordering and interpreting results of tests
- Recommending treatment or other patient care
- Assessing risk, determining prognosis, and applying principles from epidemiologic studies
- Understanding the underlying pathophysiology of disease and basic science knowledge applicable to patient care

Clinical information presented may include various media illustrating relevant findings, such as diagnostic imaging studies. Some questions require interpretation of pictorial material, such as pressure tracings, ultrasound scans, magnetic resonance imaging scans, electrocardiograms, radiographs, computed tomograms, radionuclide scans, and photomicrographs.

The blueprint can be expanded for additional detail as shown below. Each of the medical content categories is listed there, and below each major category are the content subsections and specific topics that may appear in the exam. **Please note:** actual exam content may vary.

### Renal, Endocrine, and Metabolic Disorders

Hypernatremia
- Central diabetes insipidus
- Nephrogenic diabetes insipidus
- Osmotic diuresis
- Primary hypodipsia
- Dehydration
- Gastrointestinal fluid losses

Hypervolemia

Hypovolemia

**Potassium disorders**

- Hyperkalemia
  - Pseudohyperkalemia
  - Drug-induced
  - Adrenal insufficiency

- Hypokalemia
  - Vomiting
  - Diarrhea
  - Renal losses
    - Drug-induced

**Acid-base disorders**

- Metabolic acidosis
  - Increased anion gap
    - Lactic acidosis
    - Ketoacidosis
    - Hypoalbuminemia
  - Normal anion gap
    - Diarrhea
    - Saline resuscitation-associated
      - Drug-induced
  - Decreased anion gap in multiple myeloma

- Metabolic alkalosis
  - Diuretic-induced (contraction alkalosis)
  - Other metabolic alkalosis topics (parenteral
    ...nutrition–induced, complications of citrate anticoagulation)

- Mixed acid-base disorders

- Respiratory acidosis

- Respiratory alkalosis

**Toxic ingestions**

- High osmolar gap
  - Ethanol
  - Methanol
Isopropyl alcohol
Ethylene glycol
Propylene glycol
Normal osmolar gap
Salicylates

**Calcium, phosphate, and magnesium disorders** <2%
- Hyperphosphatemia
- Hypophosphatemia
- Hypercalcemia
- Hypocalcemia
- Hypermagnesemia
- Hypomagnesemia

**Hyperammonemia** <2%

**Diabetes mellitus (excluding diabetic ketoacidosis) and energy metabolism** <2%
- Hyperglycemic hyperosmolar state
- Hyperglycemia
- Hypoglycemia

**Thyroid disorders** <2%
- Hypothyroidism
- Hyperthyroidism
- Euthyroid sick syndrome

**Parathyroid disorders** <2%

**Adrenal disorders** <2%
- Adrenal insufficiency
  - Relative adrenal insufficiency in critical illness
- Adrenal excess
- Addison’s Disease

**Pituitary disorders** <2%

**Tumor-related syndromes** <2%

**Acute renal failure** 2%
- Contrast-induced
- Pigment-induced
- Oncology-related
- Pre-renal disease
- Intrinsic disease
  - Glomerulonephritis
  - Interstitial nephritis
  - Rhabdomyolysis
  - Acute tubular necrosis
- Renal replacement therapy
### Cardiovascular Disorders

**Acute coronary syndromes**

Unstable angina pectoris and non-ST-segment elevation myocardial infarction (NSTEMI)
- Unstable angina pectoris
- NSTEMI

ST-segment elevation myocardial infarction (STEMI)
- Diagnosis
- Complications
  - Heart failure, cardiogenic shock
  - Ventricular septal defect
  - Acute mitral regurgitation
  - Ventricular wall rupture
  - Electrical conduction abnormalities
  - Right ventricular failure
- Arrhythmias

**Management of STEMI**
- Cocaine-related ischemia

### Arrhythmias

**Supraventricular tachycardia**
- Atrial fibrillation
- Atrial flutter
- Multifocal atrial tachycardia
- Pre-excitation syndromes
- Paroxysmal supraventricular tachycardia
  - (atrioventricular [AV] nodal reentrant tachycardia)

**Ventricular arrhythmias**
- Nonsustained ventricular tachycardia
- Monomorphic ventricular tachycardia
- Polymorphic ventricular tachycardia
- Ventricular fibrillation
- Accelerated idioventricular rhythm
- Long QT syndrome
- Brugada syndrome

**Bradyarrhythmias**
- Sinus bradycardia
- Sinoatrial exit block
- Atrioventricular block

**Pacemakers and defibrillators**
### Heart failure
- Heart failure with reduced ejection fraction (HFrEF)
- Heart failure with preserved ejection fraction (HFpEF)

### Hemodynamic monitoring
- Interpretation of arterial catheterization
- Pulmonary arterial catheterization
- Central venous catheterization
- Non-invasive hemodynamic monitoring

### Vascular disorders
- Aortic dissection and aneurysm
  - Aortic dissection
  - Aortic aneurysm and transection
- Shock
- Hypertensive emergency and urgency

### Valvular heart disease
- Mitral stenosis
- Aortic stenosis
- Aortic regurgitation
- Mitral regurgitation
- Endocarditis
- Structural defects
  - Atrial
  - Ventricular

### Pericardial disease
- Pericarditis
- Cardiac tamponade

### Myocardial disease
- Myocarditis
- Hypertrophic cardiomyopathy
- Peripartum cardiomyopathy
- Stress cardiomyopathy

### Mechanical circulatory support
- Intraaortic balloon pump (IABP) counterpulsation
- Extracorporeal membrane oxygenation (ECMO)
- Ventricular assist devices (VADs)

### Transplanted heart
