Infectious Disease
Certification Examination Blueprint

Purpose of the exam

The exam is designed to evaluate the knowledge, diagnostic reasoning, and clinical judgment skills expected of the certified infectious disease specialist in the broad domain of the discipline. The ability to make appropriate diagnostic and management decisions that have important consequences for patients will be assessed. The exam may require recognition of common as well as rare clinical problems for which patients may consult a certified infectious disease specialist.

Exam content

Exam content is determined by a pre-established blueprint, or table of specifications. The blueprint is developed by ABIM and is reviewed annually and updated as needed for currency. Trainees, training program directors, and certified practitioners in the discipline are surveyed periodically to provide feedback and inform the blueprinting process.

The primary medical content categories of the blueprint are shown below, with the percentage assigned to each for a typical exam:

<table>
<thead>
<tr>
<th>Medical Content Category</th>
<th>% of Exam</th>
</tr>
</thead>
<tbody>
<tr>
<td>Bacterial Diseases</td>
<td>27%</td>
</tr>
<tr>
<td>Human Immunodeficiency Virus (HIV) Infection</td>

</tr>
<tr>
<td>General Internal Medicine, Critical Care, and Surgery</td>
<td>18%</td>
</tr>
</tbody>
</table>

100%
Exam questions in the content areas above may also address clinical topics in clinical syndromes and general internal medicine that are important to the practice of infectious disease.

**Exam format**

The exam is composed of multiple-choice questions with a single best answer, predominantly describing patient scenarios. Questions ask about the work done (that is, tasks performed) by physicians in the course of practice:

- Making a diagnosis
- Ordering and interpreting results of tests
- Recommending treatment or other patient care
- Assessing risk, determining prognosis, and applying principles from epidemiologic studies
- Understanding the underlying pathophysiology of disease and basic science knowledge applicable to patient care

Clinical information presented may include patient photographs, radiographs, electrocardiograms, recordings of heart or lung sounds, and other media to illustrate relevant patient findings.

The blueprint can be expanded for additional detail as shown below. Each of the medical content categories is listed there, and below each major category are the content subsections and specific topics that *may* appear in the exam. The inherent complexity of the field of infectious disease leads to considerable overlap in content categories, and each question can only be assigned to a single blueprint topic. Thus, a question addressing the cause of fever and rash likely would be classified under the specific organism, while a similar question addressing the treatment of that same illness would be classified under the antimicrobial agent used. **Please note:** actual exam content may vary.
Bacterial Diseases

Gram-positive cocci
- Staphylococcus aureus
- Streptococcus
- Enterococcus

Gram-positive rods
- Listeria
- Corynebacterium
- Bacillus
- Erysipelothrix

Gram-negative cocci and coccobacilli
- Neisseria
- Haemophilus

Gram-negative rods
- Enterobacteriaceae
- Pseudomonas
- Stenotrophomonas
- Burkholderia
- Acinetobacter
- Aeromonas
- Salmonella
- Shigella
- Campylobacter
- Vibrio
- Pasteurella
- Yersinia
- Legionella
- Capnocytophaga
- Bartonella
- Brucella
- Bordetella
- Streptobacillus
- Francisella
- Helicobacter

Anaerobes
- Gram-positive cocci
- Gram-positive rods
- Gram-negative rods

Actinomycetes
- Actinomyces
- Nocardia
Spirochetes
   Treponema
   Borrelia
   Leptospira

Mycoplasma
   M. pneumoniae
   M. genitalium

Tropheryma whippelii

Chlamydia
   C. trachomatis
   C. pneumoniae
   C. psittaci

Rickettsia
   R. conorii
   R. akari
   R. rickettsii
   R. prowazekii
   R. typhi
   Orientia tsutsugamushi
   R. parkeri
   R. africae
   Coxiella burnetii

Ehrlichia
   E. chaffeensis
   E. ewingii
   Anaplasma phagocytophilum

Mycobacterium
   M. tuberculosis
   M. bovis
   M. leprae
   Nontuberculous mycobacteria

 Syndromes characterized by bacterial pathogens
   Head and neck
   Respiratory
   Gastrointestinal
   Ophthalmologic
   Genitourinary
   Dermatologic (including skin and soft-tissue infections)
   Musculoskeletal
   Neurologic
   Cardiovascular
Human Immunodeficiency Virus (HIV) Infection

**Epidemiology**
- Transmission
- Testing and counseling
- Initial laboratory evaluation
- Prevention

**Pathogenesis**
- Virology
- Immunopathogenesis
- Acute HIV infection

**Laboratory testing**
- Diagnostic evaluation
- Baseline evaluation

**HIV treatment regimens**
- Antiretroviral therapy drug classes
- Adverse effects of treatment
- Drug-drug interactions
- When to start therapy
- Selection of optimal initial regimen
- Laboratory monitoring
- Treatment-experienced patients

**Opportunistic infections (OIs)**
- Prevention
- When to start HIV therapy in the context of active OIs
- Immune reconstitution inflammatory syndrome
- Bacteria
- Mycobacteria
- Fungi
- Parasites
- Viruses

**Malignancies**
- Kaposi's sarcoma
- Lymphoma
- Cervical cancer
- Anal cancer

**Other complications of HIV**
- Hematologic
- Endocrine
- Gastrointestinal
- Renal (HIV-associated nephropathy [HIVAN])
- Cardiac (HIV cardiomyopathy)
Pulmonary
Head, eye, ear, nose, and throat
Musculoskeletal
Neurologic
Psychiatric
Dermatologic

**Related issues**
Substance use
Organ transplantation
Primary care
Miscellaneous non-HIV-related complications that may occur more commonly in those who have HIV
Pregnancy

---

**Antimicrobial Therapy** 9% of Exam

**Antibacterials**
Aminoglycosides
Antifolates
Carbapenems
Cephalosporins
Fluoroquinolones
Glycopeptides, glycolipopeptides, and lipopeptides
Lincosamides
Macrolides
Monobactams
Nitroimidazoles
Oxazolidinones
Penicillins
Polymyxins
Rifamycins
Streptogramins
Tetracyclines
Non-sulfonamide (sulfa drug), non-trimethoprim urinary tract agents
Topical antibacterials
Other routes of administration

**Antivirals (non-HIV)**
For influenza
For herpes simplex
For cytomegalovirus
For hepatitis C and respiratory syncytial virus (RSV)
For hepatitis B
Interferon alfa 2a and alfa 2b
For hepatitis C
Miscellaneous and topical agents

Pharmacology and outpatient parenteral antimicrobial therapy (OPAT)
- Susceptibility testing
- Drug resistance
- ADME (absorption, distribution, metabolism, and excretion)
- Dosing
- Drug interactions
- Toxicity
- Outpatient parenteral antimicrobial therapy

Prions
Protozoal intestinal infections

- *Balantidium coli*
- *Blastocystis hominis*
- *Cryptosporidium parvum* and *C. hominis*
- *Cyclospora cayetanensis*
- *Cystoisospora* (*Isospora*) *belli*
- *Dientamoeba fragilis*
- *Entamoeba histolytica* (amebiasis)
- Giardiasis
- Microsporidiosis

Protozoal extraintestinal infections

- Amebic meningoencephalitis
- Babesiosis
- Leishmaniasis
- Malaria
- Toxoplasmosis
- *Trichomonas vaginalis*
- Trypanosomiasis (general)

Nematode intestinal infections

- Anisakiasis
- *Ascaris lumbricoides* (ascariasis)
- *Capillaria philippinensis* (capillariasis)
- *Enterobius vermicularis* (pinworm)
- Hookworm
- *Strongyloides stercoralis*
- *Trichuris trichiura* (whipworm)

Nematode extraintestinal infections

- *Angiostrongylus cantonensis*
- Baylisascariosis (raccoon roundworm)
- Cutaneous larva migrans (dog and cat hookworm)
- *Dracunculus medinensis* (Guinea worm)
- Filariasis
- *Gnathostoma spinigerum*
- Toxocariasis
- *Trichinella spiralis* (trichinellosis)

Cestode infections

- *Diphyllobothrium latum* (fish tapeworm)
- *Hymenolepis* (dwarf tapeworm)
- *Echinococcus granulosus* (hydatid disease)
Echinococcus multilocularis (alveolar disease)
Taenia saginata (beef tapeworm)
Taenia solium (pork tapeworm; intestinal)

**Trematode infections (flukes)**
- Clonorchis sinensis (Chinese liver fluke)
- Fasciolopsis buski (intestinal fluke)
- Fasciola hepatica and gigantica (sheep liver fluke)
- Paragonimus westermani (lung fluke)
- Schistosomiasis (general)

**Ectoparasitic infections**
- Myiasis (human botfly or tumbu fly)
- Pediculus humanus (body, head, and pubic lice)
- Tick bites—identification and tick paralysis
- Tungiasis (Tunga penetrans)
- Bed bugs

**General principles of travel medicine**
- Pretravel preparation
- Post-travel illness
- Immigrants, refugees, and adoptees
- Travelers with specific needs
