

ABIM invites diplomates to help develop the Interventional Cardiology MOC exam blueprint

Based on feedback from physicians that MOC assessments should better reflect what they see in practice, in 2016 the American Board of Internal Medicine (ABIM) invited all certified interventional cardiologists to provide ratings of the relative frequency and importance of blueprint topics in practice.

This review process, which resulted in a new MOC exam blueprint, will be used on a periodic basis to inform and update all MOC assessments created by ABIM. No matter what form ABIM's assessments ultimately take, they will need to be informed by front-line clinicians sharing their perspective on what is important to know.

A sample of over 275 interventional cardiologists, similar to the total invited population of interventional cardiologists in age, gender, time spent in direct patient care, and geographic region of practice, provided the blueprint topic ratings. The ABIM Cardiovascular Board Interventional Cardiology Exam Committee and Cardiovascular Board have used this feedback to update the blueprint for the MOC exam (beginning with the Fall 2017 administration).

To inform how exam content should be distributed across the major blueprint content categories, ABIM considered the average respondent ratings of topic frequency and importance in each of the content categories.

To determine prioritization of specific exam content within each major medical content category, ABIM used the respondent ratings of topic frequency and importance to set thresholds for these parameters in the exam assembly process (described further under *Detailed content outline* below).

Purpose of the Interventional Cardiology MOC exam

The MOC exam is designed to evaluate whether a certified interventional cardiologist has maintained competence and currency in the knowledge and judgment required for practice. The exam emphasizes diagnosis and management of prevalent conditions, particularly in areas where practice has changed in recent years. As a result of the blueprint review by ABIM diplomates, the MOC exams will place less emphasis on rare conditions and focuses more on situations in which physician intervention can have important consequences for patients. For conditions that are usually managed by other specialists, the focus will be on recognition rather than on management.

Exam format

The exam contains up to 220 single-best-answer multiple-choice questions, of which up to 50 are new questions that do not count in the examinee's score (more information on how exams are developed can be found at abim.org/about/exam-information/exam-development.aspx). Most questions describe patient scenarios and ask about the work done (that is, tasks performed) by physicians in the course of practice:

- **Diagnosis:** making a diagnosis or identifying an underlying condition
- **Testing:** ordering tests for diagnosis, staging, or follow-up
- **Treatment/Care Decisions:** recommending treatment or other patient care
- **Risk Assessment/Prognosis/Epidemiology:** assessing risk, determining prognosis, and applying principles from epidemiologic studies
- **Pathophysiology/Basic Science:** understanding the pathophysiology of disease and basic science knowledge applicable to patient care

Some questions require interpretation of pictorial material, such as coronary angiograms, ventriculograms, intravascular ultrasound images, nuclear perfusion studies, computed tomograms, magnetic resonance images, electrocardiograms, echocardiograms, and peripheral vascular imaging studies. A tutorial, including examples of ABIM exam question format, can be found at abim.org/maintenance-of-certification/exam-information/interventional-cardiology/exam-tutorial.aspx.

Content distribution

Listed below are the major medical content categories that define the domain for the Interventional Cardiology MOC exam. The relative distribution of content is expressed as a percentage of the total exam. To determine the content distribution, ABIM considered the average respondent ratings of topic frequency and importance. Informed by these data, the Interventional Cardiology Exam Committee and Cardiovascular Board have determined the medical content category targets shown below.

CONTENT CATEGORY	TARGET %
Case Selection and Management	23%
Procedural Techniques	22%
Complications of Coronary Intervention	8%
Catheter-Based Management of Noncoronary Disease	10%
Basic Science	5%
Anatomy, Anatomic Variants, and Anatomic Pathology	6%
Pharmacology	14%
Cardiac Imaging and Assessment	7%
Miscellaneous	5%
Total	100%

How the blueprint ratings are used to assemble the MOC exam

Blueprint reviewers provided ratings of relative frequency in practice for each of the detailed content topics in the blueprint and provided ratings of the relative importance of the topics for each of the tasks described in *Exam format* above. In rating importance, reviewers were asked to consider factors such as the following:

- High risk of a significant adverse outcome
- Cost of care and stewardship of resources
- Common errors in diagnosis or management
- Effect on population health
- Effect on quality of life
- When failure to intervene by the physician deprives a patient of significant benefit

Frequency and importance were rated on a three-point scale corresponding to low, medium, or high. The median importance ratings are reflected in the *Detailed content outline* below. The Interventional Cardiology Exam Committee and Cardiovascular Board, in partnership with the physician community, have set the following parameters for selecting MOC exam questions according to the blueprint review ratings:

- At least 75% of exam questions will address high-importance content (indicated in green)
- No more than 25% of exam questions will address medium-importance content (indicated in yellow)
- No exam questions will address low-importance content (indicated in red)

Independent of the importance and task ratings, no more than 15% of exam questions will address low-frequency content (indicated by “LF” following the topic description).

The content selection priorities below are applicable beginning with the Fall 2017 MOC exam and are subject to change in response to future blueprint review.

Note: The same topic may appear in more than one medical content category.

Detailed content outline for the Interventional Cardiology MOC exam

 – **High Importance:** At least 75% of exam questions will address topics and tasks with this designation.

 – **Medium Importance:** No more than 25% of exam questions will address topics and tasks with this designation.

 – **Low Importance:** No exam questions will address topics and tasks with this designation.

LF – Low Frequency: No more than 15% of exam questions will address topics with this designation, regardless of task or importance.

CASE SELECTION AND MANAGEMENT (23% of exam)	Diagnosis	Testing	Treatment/ Care Decisions	Risk Assessment/ Prognosis/ Epidemiology	Pathophysiology/ Basic Science
---	------------------	----------------	--------------------------------------	---	---

CHRONIC ISCHEMIC HEART DISEASE (7% of exam)

Clinical characteristics (demographics and comorbidities)					
Laboratory abnormalities and cardiac catheterization (hematology, coagulation, and chemistry)					
Renal insufficiency and cardiac catheterization					
Noninvasive testing before diagnostic catheterization					
Selection of treatment modality					
Interventional therapy					
Surgical therapy					
Medical therapy					
Preoperative cardiac evaluation for noncardiac surgery					
Preoperative revascularization before noncardiac surgery					

UNSTABLE ANGINA AND NON-ST-SEGMENT ELEVATION MYOCARDIAL INFARCTION (UA AND NSTEMI) (6% of exam)

Evaluation and risk stratification of the UA and NSTEMI					
UA/NSTEMI – pharmacologic management					
UA/NSTEMI – timing of cardiac catheterization					
UA/STEMI – percutaneous coronary intervention (PCI)					

✔ – **High Importance:** At least 75% of exam questions will address topics and tasks with this designation.

⚡ – **Medium Importance:** No more than 25% of exam questions will address topics and tasks with this designation.

✘ – **Low Importance:** No exam questions will address topics and tasks with this designation.

LF – Low Frequency: No more than 15% of exam questions will address topics with this designation, regardless of task or importance.
